

## **TRAINING REPORT**

### **University of Oviedo - online**

**15<sup>th</sup> -17<sup>th</sup> December 2021**

The online training held by the professors from University of Oviedo, Spain, to the teachers from Serbia and Albania took place between December 15<sup>th</sup> and 17<sup>th</sup> of 2021. The trainings were organized over the Microsoft Teams platform, with about 30 trainees participating.

The aim of this training was to provide us with basic proficiency for usage of contemporary tools and applications which can help us to improve the quality of teaching and increase interactivity and fun factor of lectures for the students of all academic levels. We were presented with 20 different tools in the scope of the theme: From the master class to active learning - A new paradigm in the training of university teachers. Each tool was presented in great detail, their main characteristics, applications in teaching, capabilities, advantages and disadvantages were all made clear to us by the lecturers. The tools were divided in 5 groups - Creative presentations, Active participation, Gamification, Detecting plagiarism and Augmentative reality. After the presentation of each group, participants could exchange their ideas on where the tools could be used in their courses and whether they have, and in which way, implemented the use of the mentioned or similar tools.

The training presented an outstanding opportunity to grasp the knowledge of many different environments in a short period of time, many of which are going to prove useful in creating as high-quality teaching materials as possible. Thanks to this training, all professors from all faculties and departments will be able to innovate their lectures with ease, as well as pass the newly acquired knowledge to their other colleagues.
